## PROJECTS

### PHP / HTML / JAVASCRIPT / CSS

During the second term of college I was able to do several projects in HTML/JavaScript/CSS, and during Entra21 I also was able to apply my previous knowledge and improve it daily, using web languages in my projects and daily exercises of PHP, on my GitHub you can find my [personal website](#) all in HTML, in addition, PHP I have also some projects, I'm proud of the [Balcão Brasil](#) (final project of the course Entra21), now I'm keeping it as open source, my most recent improvement were start moving the code for a CI/CD environment at AWS instead of Heroku service.

### C / C++ / C#

The computer programming course introduced me to programming using the C language, final project was to make a [support ticket system](#). I'm still producing my [C++ repository](#), and I also was able to participate in a boot camp that thought C#, by the end of it, I did a [catalog](#) of movies/Japanese manga/series project, besides that boot camp give me some instructions to create my own API using ASP.net.

### LINUX

I had the opportunity to learn Linux in a very interesting way during college, we had practices with scripts to learn not only how the operating system works but also the commands. I created in Portuguese something similar to the model I've learned, which is on my [GitHub](#).

### VERSION CONTROL AND AGILE METHODOLOGY

I had an intense experience during the PHP course - Entra21, to complete the project we've done daily scrum, used kanban on [Projects GitHub](#) and versioning using git.

### DATABASES

I had used relational databases in some projects. I've already used Oracle, MariaDB and PostgreSQL. You may check it two projects using a database, [Balcão Brasil](#) (You may create a "buying" advertise instead of selling) and [Back2Home1](#) (real estate administrator)
